

RFID BASED ATTENDANCE SYSTEM

Presented By:

Hashir Ashraf
Sohaib Afzal
Talha Iftikhar

PROJECT OVERVIEW:

Objective:

- The RDM6300 RFID reader operates at a frequency of 125 kHz same as of college cards .
- use of web hosting
- attendance marking

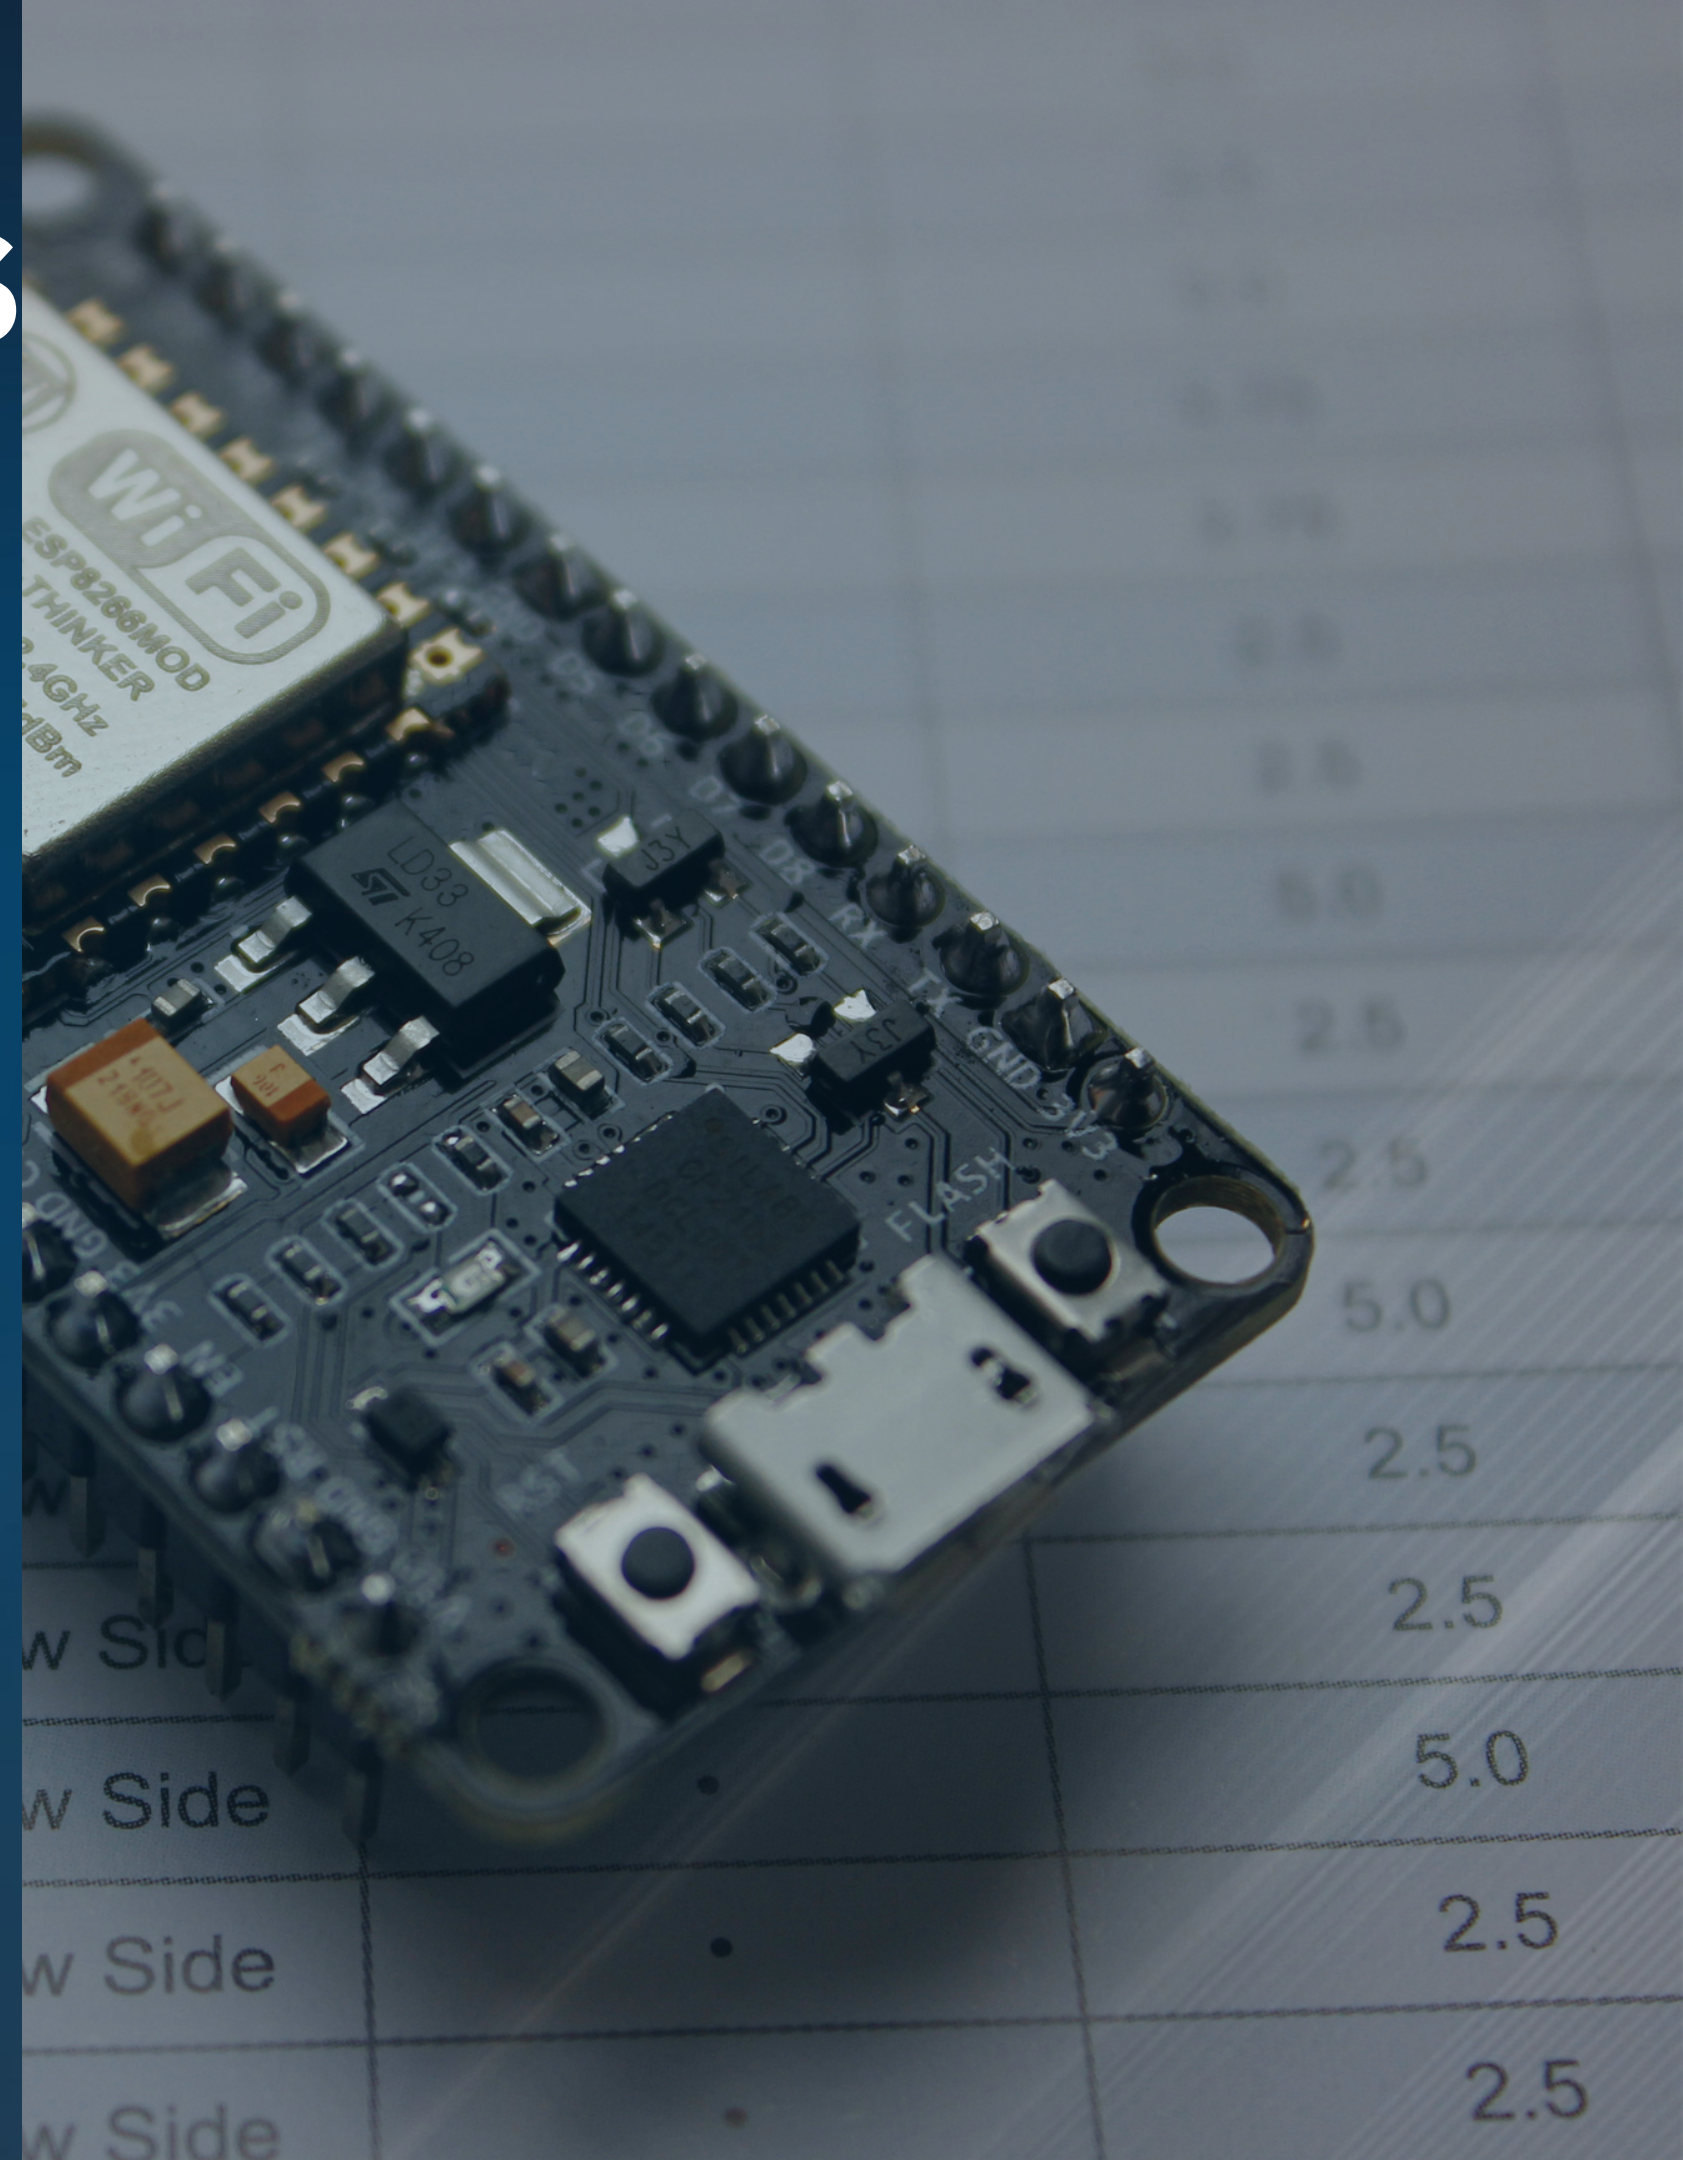

Key Features:

Providing secure and controlled access to various college areas based on user roles, with real-time monitoring for enhanced security.

Project Components

- Esp8266 (NordMCU)
- RDM 6300
- RFID writer Module
- i2C LCD
- BUZZER
- Leds

Web hosting and management

TO STORE AND MANAGE

- XAMPP SERVER
- Our attendance records are stored in a MySQL database

DATA TRANSMISSION:

- Transmitting attendance data securely using standard HTTP or HTTPS protocols."

Web hosting and management

DATA BASE CONNECTIVITY

Same IP of NordMCU and HostMachine

RFID Module (RDM 6300)

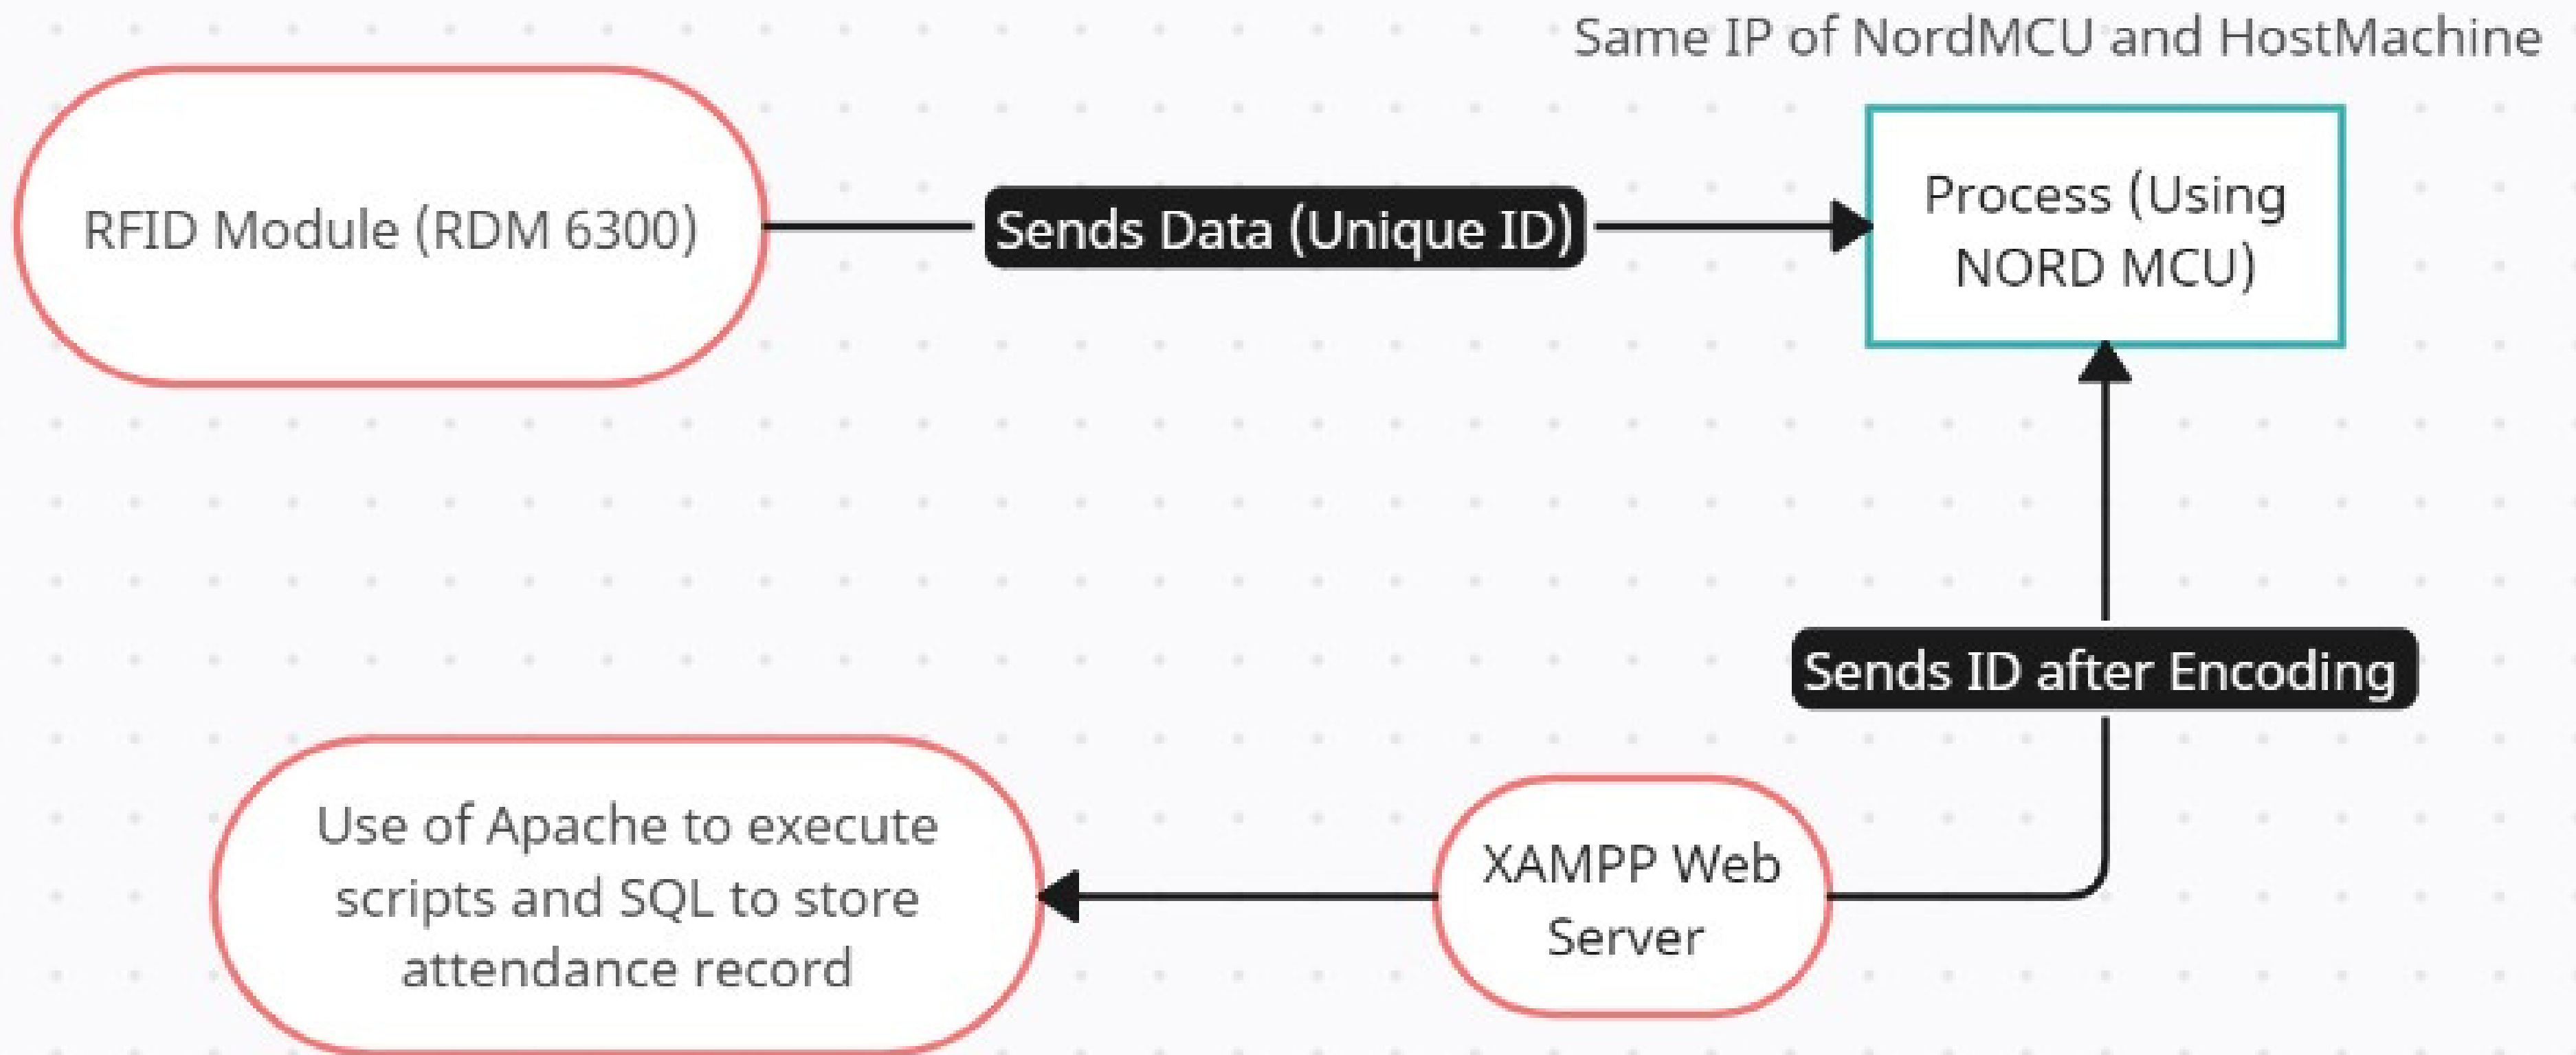

Sends Data (Unique ID)

Process (Using
NORD MCU)

Sends ID after Encoding

Use of Apache to execute
scripts and SQL to store
attendance record

XAMPP Web
Server

Communication Network

IP Configuration and Device ID

- Same IP address of NordMCU and Host Machine(on which server is hosted)
- Unique device ID which helps to address privacy issues

Scalability

1. Increased User Base
2. Adaptive Software Architecture
3. Cost Effective
4. Friendly User Interface

Real World Applications

1. **Education Sector**
2. **Corporate Environments**
3. **Healthcare Facilities**
4. **Public Transportation**

THANK YOU
